BeautyRest

A large Honu (Hawaiian monk seal) is shown resting on a rocky seabed in a deep sea habitat. The turtle's head is turned to the left, and its body extends towards the right. The background is a dark, rocky underwater environment with some coral-like structures. The text is overlaid on the top and bottom of the image.

The question: Where and when do Honu at Honokowai forage?

The challenge: To gently attach and retrieve TDRs on large Honu in deep sea habitat

Acknowledgment

An underwater photograph of several sea turtles swimming in clear blue water. One turtle is in the foreground, looking towards the camera. Another is swimming in the upper left, and a third is partially visible in the lower left. The background shows a coral reef.

Special thanks to the honu of
Honokowai for their full and
faithful participation and patience
in this project
