Video Post by Ikaika Marzo (2 hours ago):
Short video of the over flight this morning. Lava hadn't reach the ocean yet but it is spreading across the leading edge. Fissure 8 is still pumping hard sending lava to Kapoho. Flow front is just about 500yards away from the ocean. Expecting an ocean entry real soon. Also something is happening close to fissure 8. The channelized flow have been seeing some changes over the past 12 hours. Near fissure 8, over flow of the perched pond might be happening soon #aiohaforpuna #stayclassypuna
