Two captures - one in early
one at AOL

SN #493663 (Tidbit) Kaneohe Bay, Mark's Reef, Oahu

8

20-22 NOV. 88

Subject: 3 days in Kaneohe Bay

Thierry, thought you would be interested in an overview of activities/results. Three days work yielded 17 turtles. More could have been caught, but we limited it due to time required to do workups, biopsies etc. Tumor scores were as follows:

TS0= 3 turtles

TS1= 4

TS2= 3

TS3= 7

Admittedly, we tried to target tumored turtles, passing over many that seemed to be clean of growths. Nevertheless, there was no problem finding FP ones, whereas on some of our trips out there in recent months they seemed scarce (as you'll agree, I think).

Turtles were caught at Arnold's Reef and Reef 42-43. Seven were close to or over 100 lbs (>70 cm SCL) since an objective of what AA wanted to do was to look closer at tumors from larger turtles (via Terry Spraker) for characteristics of regression, -following in the path of the JAAH 1999 paper- Pathology of FP's in Olive Ridelys in Costa Rica.

That's the story in capsule form. The work seemed to go really well. Five of the turtles with FP were oral swabbed (by me at Bob Morris' suggestion). They were submitted via Bob on Wednesday morning to IDEXX.

Aloha, Geo.

PS Wish you had been able to go.
