Subject: Re: URGENT MESSAGE Re: Turtle Coils /Timers

George,

Thanks for the update on the development of the electromagnets, etc. I sure hope that Larry is able to get everything done and too you on time. Time will tell.

I was able to capture the TDR turtle at Puako today. Capture time was 1603. I caught it using the scoop net and two students helped me carry it back to the shore. Using the 12Volt dremel tool I was able to get the whole tag and all of the peripheral fiberglass and resin off. The whole surface is nearly perfectly clean now. The animals was released at 1620 hrs- so we were pretty efficient in getting everything done and the turtle back into the water. The animal looked very healthy and robust and the area under the tag did not show any unusual or irregular growth- it all looked very good.

RFL- Q456

old tags

SCL- 65.7
SCW- 48.5
CCL- 70.5
CCW- 63.0

8/25/97 measurements

I'll see what data we get out of the tag later in the week when I have a few minutes free time. Our first day of classes is tomorrow so I guess it is time to get back to work.

Marc

6 Nov. 96 Continued from bottom of next page.
WEDNESDAY
#2 parking - Hawaiian activist group across from
lava flows. Victor introduced us to John "Fonytail" Victor.
said they can be difficult when drinking alot, etc. Many
picnic tables inside yard. Hawaii state, Japanese, and
Canadian flags flying upside down.

Introduce to Kan School preschool teacher. May see turtles
in shallow boat-ramp bay all the time. End lit. kids + Video:

BEVERLEE CHIP, KANEHAMETTA Preschool, P.O. Box 165

KAILUA-KONA 96745.

Two "Protected" (green & white) turtle signs bolted to trees - ^{LAVA} area.
Saw woman who I sent them to (lives in adjacent home).

200x10' set in tubes and set across inlet of park.

Achilles inflatable use to hold 12 turtles + 2 in tubes = 14

All turtles taken to lava (ray shade) removed one by one from
inflatable. Most tags have algae, hence possible reason why
we can't see them - thought most didn't have tags.

> ~ 2 pm students did scuba. I snorkeled. Saw only one
turtle, on bottom, no point ~ 20' deep. Saw several near inlet.

Saw ~ 5 in shallows of by boat ramp. No or little fear: must be
being left alone. Not captured due to more Hawaiians gathered
across street drinking beer. Report that some hauler rocks
to bask.

Depart Aloha 545 pm for Honolulu.

HONANAU #3

NOV 96

20 lbs - 105 lbs

SL 42.3 cm - 69.6 cm

I recall we drove there once thereafter
but surf conditions caused us to not work
there, but go to KAHALOU.

Special needs - ^{TRACE ONE OF THREE needed} flippers, tracing of certain sizes.

(2) PLASMA & RBC samples (never before collected here). 12 DNA, 11 plasma

(3) Tag returns from other locations.

(4) Petroglyph ^{one from Mokuauia} of Turtle(?)

Lava flow area to N. of Park has many picnic

tables - 3+ 26'ft boats with snorkelers in Bay.

Visited with Victor Pio and Stanley Sakamoto (Akiy)

↖ Turtles seen at same places - near boat ramp and at inlet
Bay of the Park.

Date: Sat, 14 Sep 1996 08:19:36 -1000
From: Marc Rice <mrice@hpa.edu>
To: "George H. Balazs" <gbalazs@honlab.nmfs.hawaii.edu>
Subject: Re: Mahalo and Aloha to Marc and Students!

George,

I am happy to hear that the rehearsal was not a waste of time (totally). Power point software is very useful and effective.

We started our snorkel dive around 2030 hrs (after the wind had died down) with two teams of three divers. George, Lori and I were in the boat. George was rowing, Lori (fiance of our admission director) was taking data and I was doing the measuring. When a team would get a turtle, they would bring it to the boat and George and I would measure it (SCL, CCL), read old tags or put new tags on (RFL and LFL only), look it over for any apparent problems and then put it back in the water. Generally, we could keep up with the two teams but there were a couple of times where things backed up. When that happened, we would halt the progress of both teams until we caught up with the processing. There were not obviously "sick" turtles although a couple of the little guys weren't as thick (well fed?) as most but they all appeared to be doing ok. There were no signs of any sort of tumorous tissue on any of the turtles. There were three or four animals with barnacles (*Chelonibia testudinaria*).

The technique went quite well although I think that I would include another person in the vessel to help handle the animals next time. I would also recommend a head lamp (ours was broken at the time) to do the readings with.

NOTE: I did have some trouble with the new tags in that quite a number of them did not crimp properly- remember the old days. We worked on them until we could get one to close properly. In one instance I put tags on one front flipper and one hind flipper because I felt badly about the other front flipper being abused.... what a softy!

I think that this type of work could be done on an as we catch them basis but, if we want to take the full suite of data and get blood it would have to be done on the shore. A set up on the sand beach of the lagoon would possibly work. We would endeavor to hang several lights above the work area so that it would be easy to see what was happening. We could work up the animals and then release them (with paint marks) right away. We would need to have a small holding area for them just in case there was a backup. This whole process would require a group of students to help you and a group of students to do the capture work. These groups could be traded- each group could fill 5 tubes and then bring them back to work up. The group on the beach could take the tubes and go out to continue the capture work and the group that came in would work with you to work up the turtles. Sounds kind of complicated but something along these lines might work....

As to the "mystery," perhaps you have hit on something. We still have never caught an adult animals in Kiholo. Are the larger animals outgrowing the area and leaving? Are we constantly getting recruiting into the bay from juveniles which remain in the area for a number of years and then leave? One thing to look at is the size distribution of the animals captured each year. One would assume that, if the animals were all staying in the area, the mean size of the animals would increase over the years. If this is not the case and the mean remains fairly constant over the years, then we would have a static population size that is feed on the small end by recruits and lost at the upper end as the larger animals leave the area. Worth a look? Perhaps a nice project for one of my students.....?????

I will try and get the data to you soon.

Thanks so very much for allowing us to do some work on Wednesday

night. The students were thoroughly excited about the project and had a wonderful time.

I must say though, that it is very valuable for the students to be able to work with you in a less hurried setting during the daylight so that they can learn more about the process and get the benefit of your conversation and sage remarks! It is indeed a valuable time for many of them.....
