To: "George H. Balazs" <gbalazs@honlab.nmfs.hawaii.edu>  
Subject: Re: Turtles

George--

Well, I got out there yesterday, and was a bit disappointed. The turtles seemed way more skittish than the last time I was there, the water was cold and visibility was poor. However, I managed to find the same little reef/rubble field, and did get a couple glimpses of cleaning going on. I'm still wondering why the turtles didn't seem to want anything to do with me this time (though it would seem to me to be a more natural reaction than their apparent uncaring attitude last time). Do you know what their color vision is like, whether a wetsuit vs a two-piece light colored bathing suit might make a difference, or would you speculate that it was just some other external factor? It did seem, though, that there were a bunch of individuals around when I hopped in the water, and none left by the time I'd snorkeled for an hour or so.

Also interesting--I saw some antagonistic interaction, T. duperry chasing and biting at large tumors on an individual over the barrier reef (not on the cleaning reef). As I see the turtles being cleaned routinely flinching as a barnacle is pulled off, I wonder how much more having that tumor tissue bitten must hurt? I guess the proliferations are enervated?

Anyway, I'll try to get back there again on Mon, weather permitting, maybe back in my old bathing suit freezing to death and see if that works a little better. Hope things at Punaluu went well. Also, I think I saw that little one-flipper turtle we tagged last time--same size, one flipper and the tags did look new...

Aloha,  
Jill

Subject: Re: checkin in

Hey George--

Yeah, I know Joyce--I think at present she's conducting a systematic survey of the whole bay (at least the inshore reefs) for turtle resting sites, as well as doing some coral work in the lab. I haven't tried it, but last time I saw her she said she had acquired an e-address: fender@hawaii.edu.

She came out with George and I the other week and we managed to get some video of cleaning. Water was pretty murky, so it's not the best quality, but I'm not complaining. I'm hoping this week the trades will calm down so I can go get some more footage. Do let me know if you plan an outing with her--I'm always game to catch some turtles or whatever.

Too bad on the FFS front, but perhaps it's for the best. It was going to be rather tricky for me to even think about getting away from the snails for that length of time especially considering that I'm already taking a mainland vacation in July. Do keep me updated, though, as I think it would be an amazing opportunity (which is why I was trying so hard to figure out how I could swing it) if it opens up...

OK, hope you're quickly digging yourself out from under the piles left while you were away...

Aloha  
Jill

*Reduce*

Hi George

I have the Atlas by Smith and I haven't found what I wanted it addresses Dictyo. specifically and then all others as a group. Yes I do know Paul and I'll try to have a talk with him on Monday. As for the tags and tumors I haven't seen any tags so I may not be looking in the right places or for the right thing (if you can bring a tag with you when you come out so I could look at it I would appreciate it--otherwise if we just discuss what they look like it may help) The tumors are easier and I have seen a few heavily tumored animals and several with smaller tumors (maybe 10% of what I see has tumors but this number is somewhat low because sometimes the vis only lets we see an outline of the turtle and sometimes I only see their backends as they swim away). Would you like to go out during the day or at night with John and I? I think Jill is coming out Monday. She said she emailed you but didn't say if that was a good day for you as well?

Last I don't know if Jill told you about the nails but here is how the test on 42 went. We set nails into the coral in the mouth of the resting sites and then went back the next day to see if they got knocked over. It was a simple task but the problem comes in that you can only mark about half the holes because the others have bottoms that won't hold a nail. It would also be nice to know how many times that hole was used in a 24 hour period, the longevity of each stay and if the hole was used by more than one individual. These are questions I want to work on when Jill and I take the camera out. All for now.

Joyce

Dear George

I have been neglecting writing things down so I don't have a proposal ready but I will work on getting you something by the end of the week. As for the turtles swimming away from me it is sort of a personal preference on their part as to whether they want to share the water with me. Some turtles will let me work to within 2 meters of them and never spook and others are out of their holes and headed the other way before I even realize they are there. I can only say that I don't intentionally scare them out of their holes and if I see one in a hole I bypass working at that hole for the time being. As for the Brill et al. article I don't think I have it but I will continue to look for it. Finally in respect to the tags I don't think that the turtles I am seeing are all untagged so I think I am just not looking for the right things. I will take into account what you said about the locations of the tags and try to keep a closer eye out for them. Please keep me informed on when you might like to visit and I will fax you a rough proposal by the end of the week. Thank you for your time.

Joyce

of course i expected no less...

question for ya: saw a turtle off of reef 42 that was tagged both with NMFS tag and a blue plastic sandwich-type tag? what's that about? small clean-looking turtle...

anyway, many many honu and a bunch o tumors at that. saw two other NMFS tags, BTW. beautiful clear day on the bay...

cheers  
jz

Re  
b

seems that joyce plans to check the whole bay for turtle resting sites, as well as do a day-night monitoring of 42, where she's got little numbers on a bunch of turtle hidey-holes. not sure how quantitative she's getting, as far as how many holes, or if she's just doing presence/absence on each reef. but john's been towing her around behind a whaler to survey reefs, and i think they plan to cover all the inshore reefs in kbay, at least to the depth that one can see from the surface. and then there's all that coral stuff in the lab that i don't talk to her too much about, something to do with growth and feeding. seems that john wants her to stay through the summer to finish that up, as he's not got anyone else who wants to do it.

anything else, let me know. i'm off to maui tomorrow am thru the weekend to chase snails around.

Re

copulation - KBAY

Joyce and I were on our way out to 42, when I said, hey, is that a turtle, cuz if it is it's the hugest turtle on the face of the planet or it's got a big air bubble under its carapace... and then i realized it was up so high because it was on top of another one. we circled around a few times, and they seemed non-plussed by our presence (at least the one on top did, as the one underneath was pretty much submerged). just as i was about to leave them to their privacy, the bottom partner came up for a breath, took a big one, and then dove, with the top one still hanging on. so i couldn't tell you what sex they were or anything, as i wasn't in the water to see it, and didn't want to bring the boat too close. we were in deep water between, say, the sand bar and 42. and though both joyce and i wished we had cameras, we didn't. no photos.

there you have it.
