From: "Jill P. Zamzow" <ZAMZOW@zoogate.zoo.hawaii.edu>
To: "George H. Balazs" <gbalazs@honlab.nmfs.hawaii.edu>
Subject: Re: Turtles

George--

Well, I got out there yesterday, and was a bit disappointed. The turtles seemed way more skittish than the last time I was there, the water was cold and visibility was poor. However, I managed to find the same little reef/rubble field, and did get a couple glimpses of cleaning going on. I'm still wondering why the turtles didn't seem to want anything to do with me this time (though it would seem to me to be a more natural reaction than their apparent uncaring attitude last time). Do you know what their color vision is like, whether a wetsuit vs a two-piece light colored bathing suit might make a difference, or would you speculate that it was just some other external factor? It did seem, though, that there were a bunch of individuals around when I hopped in the water, and none left by the time I'd snorkeled for an hour or so.

Also interesting--I saw some antagonistic interaction, T. duperry chasing and biting at large tumors on an individual over the barrier reef (not on the cleaning reef). As I see the turtles being cleaned routinely flinching as a barnacle is pulled off, I wonder how much more having that tumored tissue bitten must hurt? I guess the proliferations are enervated?

Anyway, I'll try to get back there again on Mon, weather permitting, maybe back in my old bathing suit freezing to death and see if that works a little better. Hope things at Punaluu went well. Also, I think I saw that little one-flipped turtle we tagged last time--same size, one flipper and the tags did look new...

Aloha,
Jill

George--

Well, unfortunately nothing to report for the day. It was cold and murky and choppy and I couldn't even locate the cleaning reef, though I thought I was right on top of it (could have been, too, as it's ~15 feet of water and I think visibility was about ten). I have a feeling that the turtles are a little more skittish when the visibility is poorer, when they're not able to watch you from a safe distance and only see you when you're right on top of them. Anyway, hope the conditions are better for you all when you get out there!

Dear George

Sorry it has taken so long to return your mailing but I was in Maui for a few days. The work with the turtles is going okay. We ran a little test to see what percent of the holes on 42 were being used on a daily basis and it looks like about 85% get used in a given 24 hour period. The control put an error at 10%. The rain and my Maui trip have delayed things a bit but I am now spending time snorkeling around as many reefs as possible to see exactly where the turtles are hanging out. I am going to compare this with John's substrate data to find out how much of the available substrate on a given reef is being utilized for resting. A problem arises in that the turtles will sometimes rest on a sandy slope where there is not a hole. I am going to begin mapping the positions of the holes on the reefs in the 40's this weekend and next week. John and I are going to take a night snorkel and see if we can get a count of the holes in use at night. I can identify some of the animals and have found that they associate with certain reefs but to what extent that association goes I do not know. In addition in mid-April Jill and I are going to do 24 hour camera watches on her turtle/wrasse cleaning stations and on some highly populated turtle reefs. I guess that is about all for now but I was wondering if you know of a seafloor vegetation chart for Kaneohe Bay. I was hoping to try and find a correlation between the type of algal cover and the position of the reefs that the turtles are resting on. If you know of anything remotely similar to that please give me a reference and I'll check into it. Thanks for you time.

Joyce

Hi George--

Sorry to have not gotten back to you sooner. When you left that phone message I was on Maui for a few days chasing tree snails. Anyway, today (weds), I'm in the snail lab (956-4713) for a couple hours this morning, and then I'll be at HIMB (236-7428) this afternoon and likely tomorrow as well if you want to call at your convenience. I'm gearing up for my second 24-hr stint, which is going to be at Mark's Reef, and I plan to deploy both our brand-new time-lapse minicam and the remote cam off of my boyfriend's sailboat. Right now we're jury-rigging the time-lapse to accept more battery power than it would normally, so that it will last all day.

Couple questions for you: will you be able to make a big island trip before the end of the summer? and may i have Mark Rice's e-mail, so that maybe I can hook up with him when it comes time to spend the money I got from the Natural History Museum?

Mahalo,
Jill

Reduce

Hi, George--

Thanks for the extension offer, I may take you up on it in order to get this written up well. Am just off a 24-hr stint at Mark's, and it was a zoo over there! The turtles were not where I normally find them, so I didn't get much data, perhaps due to 1) at least twelve tourist-group boats came by during the 24 hours, and one stopped and snorkeled/walked on the reef, and 2) someone's dropped a big mooring out there--2 3'x3'x2' (?) concrete blocks and a bunch of chain connected to some seriously hefty polypro and shackle and buoy. I wonder if some pleasure operation is moving in there? Dave (my man) said that he saw them bringing those in to He'eia earlier this week, and that Earl (harbormaster) was helping the people. They sure do look brand-new.

Anyway. I think I'm moving the bulk of my research out to Reef 42, it's quieter out there.

Ciao

Jill
