Crowds thronged Saturday to see the lava reach the ocean on the Big Island.

Lava spectacle awes

3-11-08 HSB

By Rod Thompson

rthompson@starbulletin.com

HILO >> Madam Pele's show changes daily as thousands trek more than a mile to watch lava flowing into the sea from a Kalapana overlook that was opened Saturday.

"The report today is that lava is vigorously going into the ocean," Hawaii Mayor Harry Kim said yesterday. "On Sunday the tube system almost completely died."

Kim said the county put out a radio advisory Sunday that the flow had slowed. "We didn't want people to be disappointed." About 8,000 people visited the site Saturday, "unbelievable in our estimation," Kim said. "Previously, 5,000 in one day was the biggest crowd I saw" — years ago at Kalapana.

On Sunday about 4,000 went to the viewing site beyond the

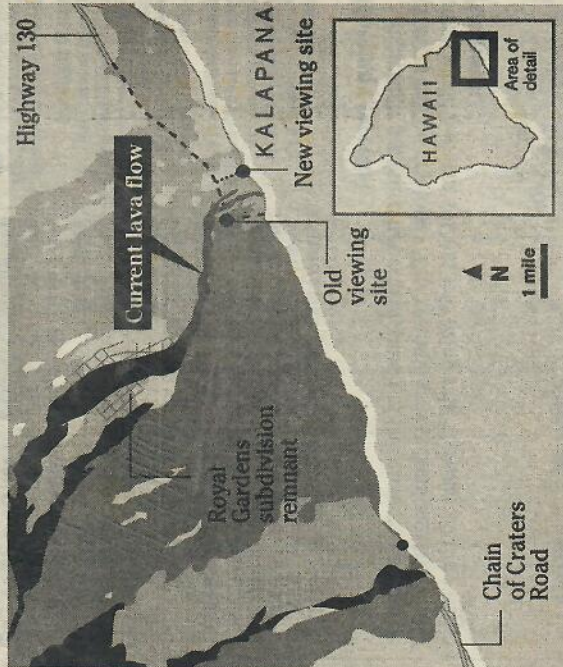

end of Highway 130.

Kim said isle airlines reported being booked solid as residents from all over the state as well as visitors responded to the opening of the viewing site.

Scientists from the Hawaiian Volcano Observatory planned to fly over today to examine apparent breakouts in the lava tube from the East Rift vent. "The flow diminished in vigor, but it seems to be coming back," said Jim Kaahikaua, scientist in charge.

The Big Island mayor said the vast majority of viewers were respectful of private property and Hawaiian cultural values but that a "very, very small percentage" showed disrespect by leaving trash, for example.

The family most immediately affected was Michael Pai and his wife, 'U'i, who have an open-air shelter facing the remnant of Highway 130 that serves as the access to the hiking trail. Pai

STAR-BULLETIN

had called the huge number of people trekking past his once-isolated home a "desecration." Kim met with Pai on Sunday. Yesterday the path of the hiking trail was shifted so that hordes of people no longer go directly past Pai's house.

Glowing red sulfur baffles geologists

3/18/08

HJB

By Rod Thompson

rthompson@starbulletin.com

HILO >> Some observers looking at the new glowing red sulfur vent at Halemau-mau Crater poetically see the eye of volcano goddess Pele staring back.

The scientists at Hawaiian Volcano Observatory are more inclined toward prose.

"The new Halemau-mau crater gas vent displayed dull red incandescence again overnight," their daily report said recently.

Whether their statements about the vent spewing thousands of tons of sulfur dioxide since last week are tinged with poetry or prose, the scientists are clear that they do not entirely understand what is going on.

"That's still under discussion," said seismologist Dave Wilson.

It's not like they never saw similar things before. They use an old Italian word for these sulfur vents, "solfataras."

They plowed through old records of solfataras at Kilauea going back to the founding of the observatory in 1912, said Scientist-in-charge Jim Kauahikaua. If observers ever saw them glow, they did not mention it, he said.

There is nothing mysterious about the cause of the glow. The surrounding rocks are really hot, Kauahikaua said, about 930 degrees Fahrenheit.

But that is cool compared with molten lava, around 2,000 degrees Fahrenheit.

And that is why the "dull red incandescence" of the vent quickly fades from view when daylight comes, while the orange glow of fresh lava is often visible well into the morning, Kauahikaua said.

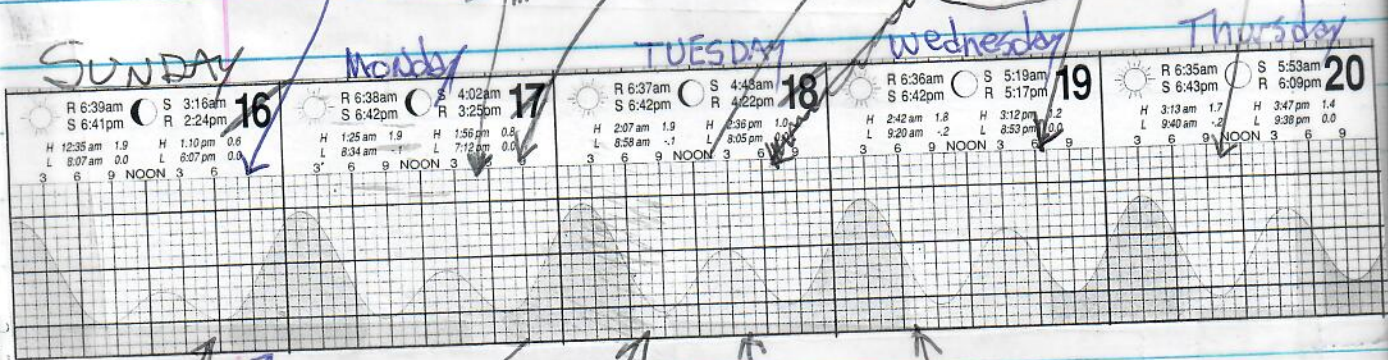

Whatever is happening, nothing yet says it is going to be an eruption. Wilson's instruments are picking up five to 10 microearthquakes per hour, he said. An eruption would produce more than 40 per hour.

The instruments also are recording tremors, jiggling of the ground, but it is disorderly, Wilson said. An eruption would show harmonic tremors, he said. That is the orderly "sound" of lava moving through a tube like music moving through air in a flute.

Devil
YEE

Large areas can collapse into the ocean with little warning

Unstable new land

A "bench" forms as lava enters the ocean. This unstable land can collapse triggering violent explosions that reach far inland.

Information and images from USGS Fact Sheet 152-00. <http://geopubs.wr.usgs.gov/fact-sheet/fs152-00/>

VIEW LAVA SAFELY

What are the volcanic hazards where lava enters the sea?

- Bench collapses can kill.
- Tephra jets and coastal lava fountains hurl hot lava inland.
- Steam blasts toss rocks up to 300 feet in the air.
- Acid fumes and glass particles can irritate eyes and lungs.
- Scalding waves burn.

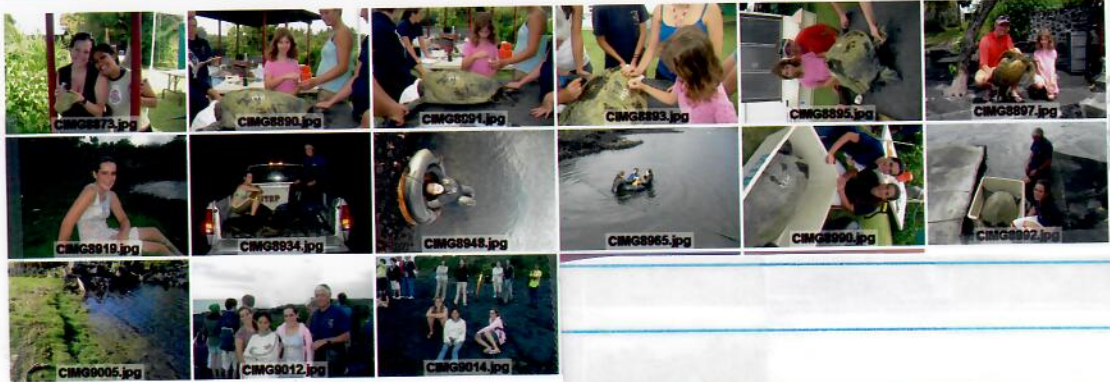

Stay inland from ocean/lava contact.

Objective: Focus capture attention completely on MANGROVE LESS COVE before ALL MANGROVES are gone

To: 'George H. Balazs' <gbalazs@honlab.nmfs.hawaii.edu>
Subject: RE: Aloha Patty

Dr. Ron Englund (he usually just uses Ron in this publications, not Ronald). I believe his area of specialization is Aquatic Biology. He said he loved to fish so much he decided to find a career where he could fish, too. So he is loving living at Kapoho. LaVonne Leiponimoi Englund. Some people call her LaVonne, esp. back at Bishop Museum. She now prefers Poni or Leiponi. She used to work as an office mgr. at Nat. Sciences at Bishop. They are the most wonderful renters! Both my previous renters (have only had two renters, both single folks) were caulk crazy. One hated insects and caulked all the screens to the wood and all around the edge of the carpet. The other was afraid of robbers and caulked the glass to the metal louvre (jealousie) frame so they would be hard to slip out. I am still cleaning up after them! So God has blessed me with these two. And God has blessed me with meeting you! I love to be helpful :) so let me know if I can do anything for your project!

Much aloha, Patty
