Subject: FW: Re: Happy New Year of the Rabbit- From George (fwd)

Dear Uncle George-san:

Hello. Thank you for e-mail. I had sent e-mail on 17 Feb. But it might be disappeared in crowded mail box. We have received 2 books and enjoyed very much. I'm appreciate you very much again.

I'll answer the 1st question. I'm sorry to late to reply. I had ask about your PhD to my acquaintance in Kochi University. He is prof. Izumi KINOSHITA. I and Yoshi had once been taught from him. But he had been sick and hospitalized last month. Recently he had got out and I got an answer.

If you enter a PhD course in Nagasaki University, it needs to registrate at least 2 years and cost much school expenses more than 1,000,000 yen in total. It might be complicated.

But he says it is possible to submit a dissertation which complete your publications under prof. KINOSHITA. You need pass an inspection of an examining committee. But it will be easier and cheaper, may be less than 100,000yen. Kochi University is located in the inner part of Tosa Bay, 100 km far from Muroto Point.
(<http://www.kochi-u.ac.jp/kaiyo/englishpage/englishpage.htm>) You are not unrelated with Kochi pref. You might have to go to Kochi at least 3 times. A provisional schedule is as follows:

Oct. Application.....write up in both languages, but I will help.
Jan. Submit a dissertation, presentation, interview
Mar. Confer a degree

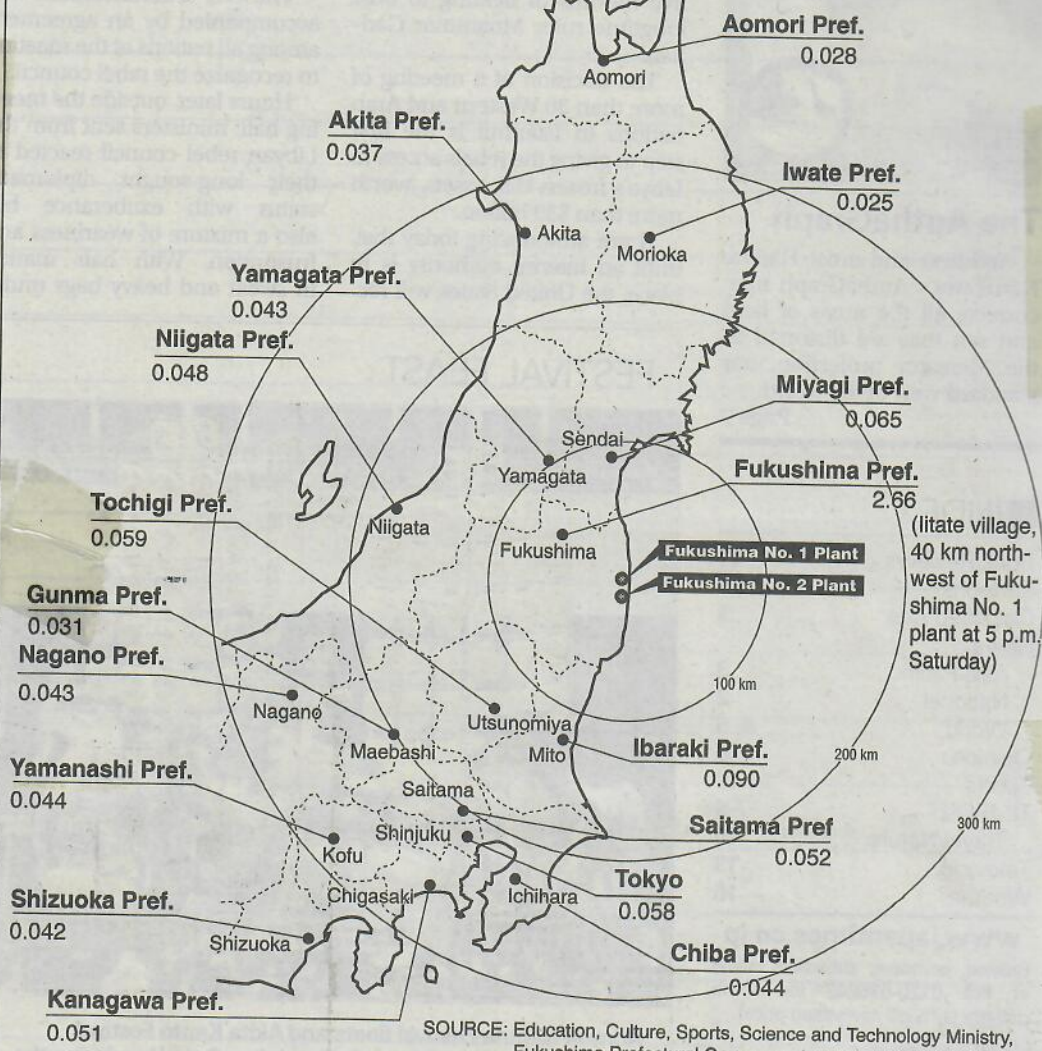

Please deliberate on this. If we have a chance, I'll introduce prof. KINOSHITA to you.

Maximum radiation levels in eastern Japan

First records of dive durations for a hibernating sea turtle

Sandra Hochscheid^{1,2,*}, Flegra Bentivegna¹
and Graeme C. Hays²

¹Stazione Zoologica Anton Dohrn, Villa Comunale 1, 80121 Naples, Italy

²School of Biological Sciences, Institute of Environmental Sustainability, University of Wales Swansea, Singleton Park, Swansea SA2 8PP, UK

*Author for correspondence (hochs@szn.it)

The first published record, from the early 1970s, of hibernation in sea turtles is based on the reports of the indigenous Indians and fishermen from Mexico, who hunted dormant green turtles (*Chelonia mydas*) in the Gulf of California. However, there were no successful attempts to investigate the biology of this particular behaviour further. Hence, data such as the exact duration and energetic requirements of dormant winter submergences are lacking. We used new satellite relay data loggers to obtain the first records of up to 7 h long dives of a loggerhead turtle (*Caretta caretta*) overwintering in Greek waters. These represent the longest dives ever reported for a diving marine vertebrate. There is strong evidence that the dives were aerobic, because the turtle surfaced only for short intervals and before the calculated oxygen stores were depleted. This evidence suggests that the common belief that sea turtles hibernate underwater, as some freshwater turtles do, is incorrect.

Keywords: hibernation; reptile; dive duration; aerobic dive limit; temperature effect
