Thursday Ni & Co for about \$60 each.
1-2g only needed.
Picked up goods at HIMB.

Steve Dallas - 948-7631 (pm 606)
I need to call him again about Nauna Lani work.
Marine Science Bldg.

- 11/22 - Report finished - no turtles seen in ponds
948-8352 freshwater, legs - salt (30) below.

11/1/83 TUES. Telephone discussion with John Flynn.
Suggested that ~~the~~ Nerve Gas will either kill the turtle or be metabolized. Instead of detectable residues remaining in the animal. Consider drawing blood and measuring acetyl cholinesterase baseline. Need "numbers" to account for population variation - plus consider size-age of animals when sampling.
Noted that some animals can function fine at 70% reduction cholinesterase; others, like possibly cows, collapse under exercise at 15% reduction.

TURTLE

C-33 $\frac{1}{2}$ " x 29"

(85cm)

George -

Dr. McCoy (Vet) went to the turtle today. He took off deep-buried suji line. He also removed several tumors around the eyes so it could see. The turtle also has tumors in its throat. Dr. McCoy is going to give a treatment of copper sulfate on a regular basis to see if the tumors will go down. The turtle has a huge "vegetative" tumor on its shoulder. Dr. McCoy took samples for lab study. He loaded the turtle with antibiotics and is going to keep watch on the turtle for the next few days and will keep her informed.

Flipper growth - 11" x 7"

548-8944

Virginia Isbel called and left this message with me. She had to leave to catch a plane to the Big Island.

H-16 called to say turtle would be released today; Crash said he sees "50 turtles" at this site. She wants me to check it out.

(TAGGING BECOMES GOAL IN ITSELF,
instead of what the tagging can tell us.
Throw back to Kridler era of tagging.

8 JAN 83 Dead turtle found by
Paul Olin

595-
7740

3333 Kahawalu Drive, Honolulu, 96817

while snorkeling at S. Point -
 Lots of moorings there, but no
 boats. Snout to end of tail - 23"

Tips of front flippers - span - 29"

? L 17"

? W 13 1/2"

? W-curve - 15"

NO tags - looked healthy.
 Right front flipper caught in knotting
 of mooring line, 3" apart. Growth on lines.
 He also noted lots of monofilament
 on mooring lost by pole & line
 fishermen. Glassy water along here.

1-17

Call from Anne Meylan concerning longline fishing request by Taiwanese to Turks & Caicos Government. Also talked to Carr about high-seas gillnet fishing for his talk in New York. He asked about my subsistence admin report.

1-19
Thurs.

Steve Kaiser reports that 1.) Hendrickson was at SLP late Dec. early Jan. - Lagoon was drained - he saw 2 grafted turtles - wondered where the 3rd one was. 2.) During the last week or 2, Steve was on his boat with Henry Rosa ~ 25 miles out off Makapuu - toward off Kaneohe - variable winds - They came across a rotting large turtle - dark shell - incredibly bad swelling. Didn't close enough to determine species; flippers seen.

1-24 Attended staff meeting for M.M.E.S.

1-24 TUESDAY Meeting with RSS concerning previous notes I wrote to him about my future here at the lab. He told me he talked to Center Director Barrett briefly, and that he was in favor of my permanent employment, and would search for a "ceiling" for it. Something might be expected "within 6 months". RSS stated "keep up the good work". Also told how some people are on "temporary positions" for many years - but this wasn't desirable in my case. He said how the "3 of us" in M.M.E.S. are assured funding for foreseeable future. He foresaw no problem at all in my continuing employment. I indicated

that this had really never been expressed to me before, and that I was encouraged greatly to hear all of this. RSS pointed out^{to} that I had a broad biological background, and that, should turtle work cease at the lab for some reason, I could work ^{capably} in other areas (^{my comment} seals-sharks).

RSS

1-24 Telephone call from Ch. Bryan regarding my inquiry about this Johnston Is. notes from 1923. He said he spent most of his time in the interior of JI looking for insects and plants. No mention in the report about turtles. But if he saw nesting pits, or fashers, or surely it would have been noted by someone. He mentioned old abandoned shacks along south shore.

1-26
Thursday

8:15 am Gene Nitta ^{finally} reported to MMES that there is now a young seal on the beach at the Sheraton Nobeai. Bill Kuleba, DAR, is gathering more info at present and will report to Gene.
