Thurs.

W. BEACH

feeding?) as more light occurred.
Slight swell lifts turtles up, making them very visible as light (back of me) penetrates through wave.
At ~ 6:30 am I drove around to west side of the lagoon. Saw

10-13-88

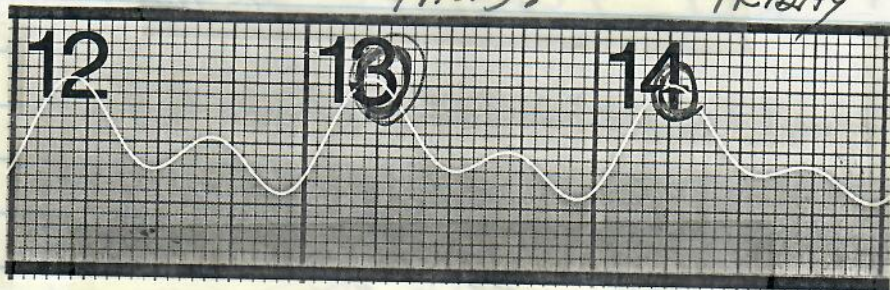

Thursday - 4 turtles (small?) surfacing of western islet where reef projection is that had Herodolign and wasn't damaged. Walked toward Paradise Cove - 7 AM. Saw 2 small close to shore ^{Bench} near "Fish toxic" sign. Through Binoculars, saw one large close to bench, - repeated.
 7:30 AM. Drove back around to east side. No turtle seen now, except one small head surface in east channel. No turtles seen where present at 6:15 am.
 6 orange buoys offshore. Turtles might have been throw-netted, like we witnessed at this site before construction. Considers my dacron net.

WEST BEACH

consider cannon net

Arrive w/ Choy at 6 AM - First Light ~ 6:15 AM
So. side of Lagoon "A" Sunrise ~ 6:45-55 AM
Thurs.

Turtles seemed to increase as dawn increased. Visibility problem?

Nov. 1988

Barry felt there were many more.

South side of LAGOON A.
Watched minimum 7-10 turtles feeding on second (outer) step of dome. Most juveniles; perhaps one or two subadults. Had throw net (dacron) but they were too far out + swell big at regular intervals. When Barry walked on reef flat, turtle vacated the area.

(P. 82 CONTINUED)

82 Thurs.

11/10/88 CONTINUED

7:30 AM drive to N. (paradise core) side of Lagoon A. Saw one turtle

feeding. None seen off shelves extending from 2 artificial islands. Collected *Pterocladia* here & *Hypnea* on first shelf (upper) at foraging site. Both shipped to Murray Dailey. ^{RESULTS} (only a few mollusks in *Hypnea* ~28 in *Pterocladia*)

#5

PAINT LIGHT

WEST BAY

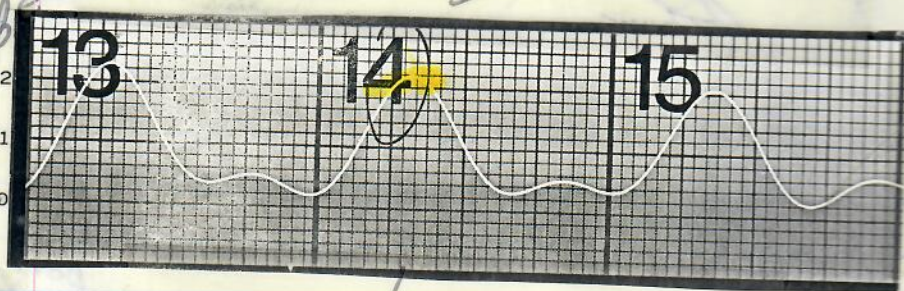

14 November - Monday - CHB & BC to S. Lagoon A site. Arrive 6:20 / left lab ~ 5:35 AM. DACRON throw net.

5-10 turtles - most T1. AGAIN they are too far out. Turtles again left (surfacing seen out by buoys) when Barry walked out w/ throw net.

Walked full coastline to Barber's Harbor entrance. Boulders piled along shoreline. Saw abundance of *elewife* in ground used for charges, - fronting lagoons #3 & #4. Limestone all fractured. Snorkeled outside/onto foraging "dome" shelf. AMAZINGLY

MONDAY

NOVEMBER

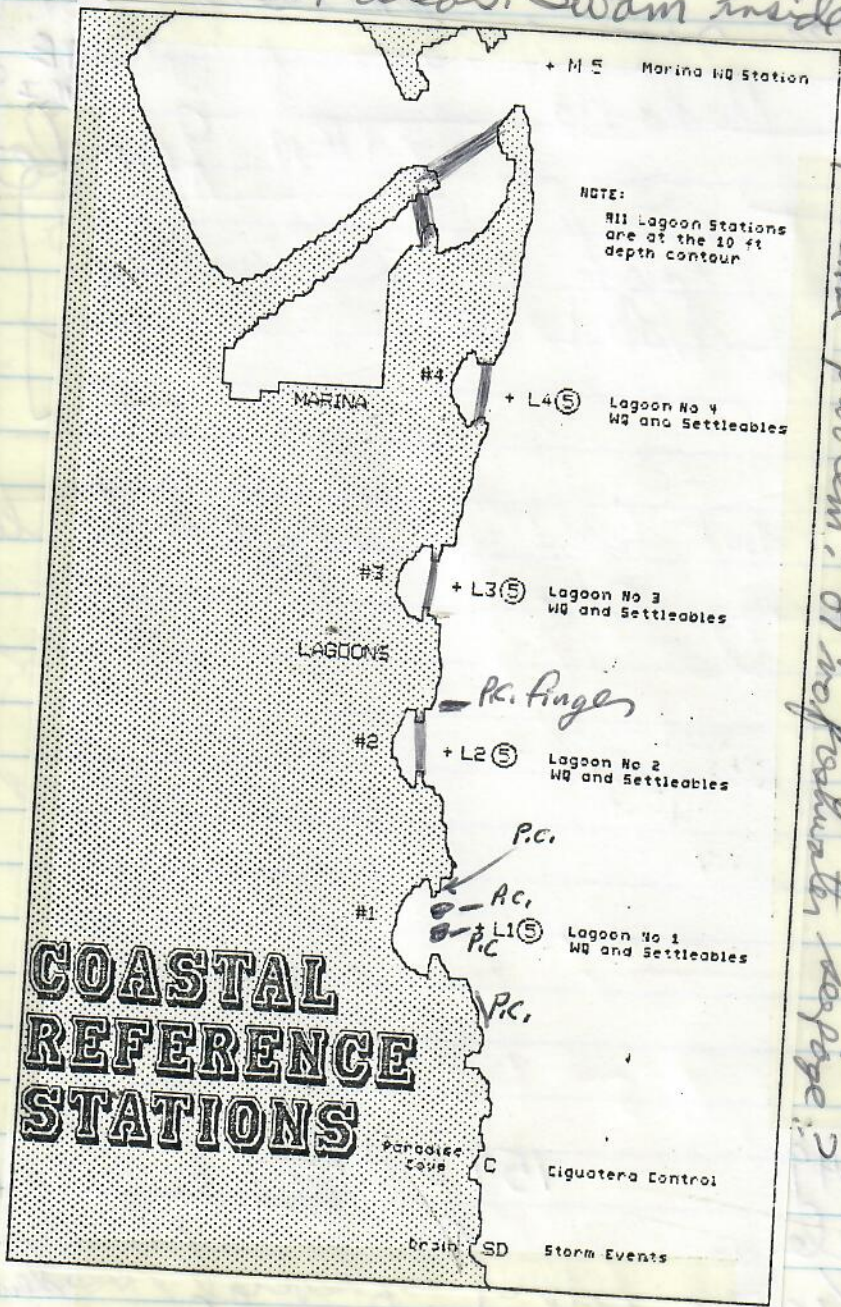

7 AM

include bubbles from breaking waves (oxygenation)

Small amount (clumps) of *Pterocladia*. Nothing else, although *Amansia* seen further out in deeper water.
 Snorkeled across Lagoon "A" -
 Noted P.C. patches on finger shelves extending out from each "islet" (more on N. one). All barren elsewhere in "cut" areas. Swam inside islets -

green Enteromorpha + ? on borders. Turbid water, cloudy low visibility. Swam along unimproved beach to the north of Lagoon #4. Saw juvenile feeding on P.C. - abundant here! here to take P.C. - abundance P.C. - but not in core deposit to embayment for power plant... some problem, or no freshwater seepage?

P.C. environmental requirements include bubbles from breaking waves (oxygenation) ?
