Subject: [mtsg-oceania-iucn] One Program's Quest to Save an Endangered Population

Aloha CTurtle friends,

I hope this message finds you well. We would like to share a sweet webstory of one of our Hawai'i hawksbill turtle projects located on the Island of Hawai'i (aka. the Big Island). There is a very small hawksbill turtle population in Hawai'i and this is our most important nesting area. Also, for those of you that might be looking for an awesome nesting beach field opportunity (and CV building experience) please consider this project in the future (information included in the story).

This is a bit of a long read, but I think we all have a bit of extra time these days ;) The story map is interactive (first link). Enjoy!!
