11/16/78
 SLP continued - All old tags look good - (INCONEZ) WKY ? 101
 looked alright. Numbers on blue tags
 are worn thin - hard to read; portions broken;
 Jasman gave me tag - 90(?) badly rounded found
 on pool bottom. Several INCONEZ squawks -
 tried to straighten. Steve reports that most
 turtles had large numbers of ectoparasites -
 egg masses? - treated with formalin 15%;
 Turtles that DO NOT BASK were heavily
 affected - some (baskers?) had none.
 (Samples collected) -

- Recall - ① Parasites on logghead
- ② Parasites from greener
- ③ Dead to W. DART?

During July - Aug - Sept of 1978 sand was
 sometimes found on sidewalk - digging at end
 of beach - but no eggs/hatchlings ever
 detected.

from Iversen - estimate
