BW photos of hawksbill & loggerhead

HOME
ADDRESS:

C. Kenneth Dodd, Jr.
 1530 Northgate Square
 Apt 22B
 Reston, VA 22090

to sea life park with Alan Ham & volunteer "Steve"
 to feed and care for turtles.
 30 December 1980 SL - 8 AM
 TUESDAY

(one) hatchling found by
 seal pool. Many hatchling tracks
 seen in sand beach. Virtually the
 only exit route from sand beach
 is the water by the pool. A search
 for more hatchlings revealed
 nothing. "Pogk" site in beach
 excavated - Remains as follows:
 (Mud at rest bottom) -

	26	-	hatched - (egg shells)
	39	-	infertile <u>ET</u> E.E.D.
Given to Marlyn Lee for Docent program	8	-	E.E.D. death
	6	-	late ^{embryonic} development, dead (almost full term)
	<u>79</u>	TOTAL	

Other 24 hatchlings probably were
 eaten by large turtles in ponds.

A second hatchling found later. SITE UNKNOWN

HATCHLINGS:

1. 30.5 grams 54.2 mm - SL

2. 31.1 grams 54.6 mm - SL

(Will not eat)
 finely cut squid introduced

Two turtles in Reef^{1/2} taken out
for tagging with new INCONEZ tags:

30 DEC 1980

TUESDAY

RT ♀ green turtle applied: L front flipper # 5101
S length 74.5 cm R front flipper # 5102
S width 57.8 cm

Hawksbill ♂

S length 72.6 cm applied: L front flipper # 5103
S width 51.5 cm R front flipper 5104
Lengthened tail - attempted copulation observed each morning

30 DEC 1980

TUESDAY

Two captive reared greens
captured from Turtle Pond
and new INCONEZ
TAGS APPLIED:

3286 RFL existing
5105 LFL new application

5106 RFL new application
3287 LFL existing

SEA WATER
25.9°C
22.6°C

Noted this relatively small turtle with

TAG 109 - Black plastron
(on carapace) S-89 x 76 measurement
mm

See page 43 for schedule of photos
taken of turtles this date 12/30/80.
