Date: Thu, 08 Feb 2007 09:28:43 -0800
From: Denise Parker <Denise.Parker@noaa.gov>
To: George H. Balazs <gbalazs@hnlab.nmfs.hawaii.edu>
Subject: Re: Very Important- Sequence for passing the magnet to start the SPOT5s

Swipe the magnet once:

Stand by - 2 quick blinks, 3 second pause and 2 more quick blinks, then LED will stay solid for 2 seconds - pass magnet over again during "long" steady light and it should change to Deployed mode

Deployed mode is 10 quick blinks, a short pause and then stay solid for 2 seconds..

Note, if magnet is swiped during the long 2 second LED it will toggle/change the mode (either Standby or Deployed).

Weather Map for Sept. 7, 2008

21
* Differences noted in New Caledonia C e
versus NAGOYA Loggerheads:

- folding ^{hand} flippers around tail
- Not crawling away when put on scale to weigh
- Scutes not peeling and flaky.
- A few very dark edge space and a few very light (yellow)
(ie largest is very light yellow)
- Don't "claw" you - cut your arms when handled.
- Don't as often open mouth to bite.
- Thinnest to scutes - bleed ~~ca~~ when elastomer is cut or scutes (along seams) sanded. But bleeding stops very quick.

KELLY TARRANTON - TV (French) report
met w/ TESA & A.J. (Andrew) Curator
Saw 3 ^{NZ} stranded turtles - only turtles they have - want to create turtle display -
1- Subadult loggerhead
1- juvenile green - small + whitish belly sunken
1- juvenile hawk - looks good
Issue is where to release them? Govt want letters
Keep them.
