Abstract Drifting seaweeds play important ecological roles in offshore waters. Recently, large amounts of drifting seaweed rafts were found in the eastern East China Sea between the continental shelf and the oceanic front of the Kuroshio Current. However, so far there have been no quantitative reports about this particular area. Two research

cruises were organized to survey abundance and standing crop of drifting seaweeds in eastern East China Sea in May 2002 and March 2004, using visual census and net sampling of drifting seaweeds. Visual census data were composed of drifting seaweed raft diameter, perpendicular distance from the transect (navigation course of the research vessel) to the raft, and positions. Using these data, we calculated the "effective stripe width" using the DISTANCE software. Drifting seaweed abundance (composed exclusively of *Sargassum horneri*) in waters located between the continental shelf peripheral area and the Kuroshio oceanic front was estimated to be higher than in any other area within eastern East China Sea in March and May. Abundance means in May 2002 and March 2004 were 6.14 and 29.05 rafts km^{-2} , respectively, while standing crop reached 126.81 and 20.35 kg km^{-2} (wet weight). Raft diameter and drifting seaweed rafts in May 2002 were significantly greater than in March 2004, reflecting seasonal growth of *Sargassum horneri*.

Abstract. Fishes associated with drifting seaweed were sampled in the Tohoku area, northwest Pacific, in late spring 1988, to analyse the community structure and ecological relationships of the dominant species. *Seriola quinqueradiata* Temminck et Schlegel was the dominant species and its escort was composed of *Thamnaconus* (*Navodon*) *modestus*, *Sebastes inermis*, *Hyperoglyphe japonica* and *Enedrias nebulosus*. *E. nebulosus*, which fed essentially on Gammarid crustaceans, was collected mainly in Sendai Bay; the other species, found in offshore water, were plankton feeders and did not exhibit any strong competition, indicating close cohabitation. The abundance of drifting seaweed in the Tohoku area peaked in May-June and decreased in July; they seemed to come from the nearest coast. Juvenile *S. quinqueradiata* (>15 cm long) were collected with set nets in Sendai Bay during summer. They seemed to use drifting seaweed along with the warm Kuroshio current) as a means of transportation during their migration from the southern spawning ground to northern Tohoku area. Drifting seaweed could be considered as a nursery, and the association of fishes with floating algae might have an influence on species recruitment.

major species found around Japan are of the genus *Sargassum* and allied genera (Yoshida 1963, Ohno 1984).

Although the Pacific Ocean Sargassum Complex has been studied in southern waters off Japan (Uchida and Shojima 1958, Hirotsuki 1960, 1965, Senta 1962, 1966, Ida et al. 1967, Nakata et al. 1988), no description of the fish fauna associated with drifting seaweed has been made in the Tohoku area. This study provides information on the fish community structure, and on the ecological inter-relationship of the dominant species which compose drifting seaweed-associated aggregations, to confirm a possible existence of an inter- and/or intra-specific competition phenomenon. Special attention is also given to a well known drifting seaweed-associated yellowtail *Seriola quinqueradiata* (Anraku and Azeta 1967) and its escorts in order to clarify the drift-associated mechanism.

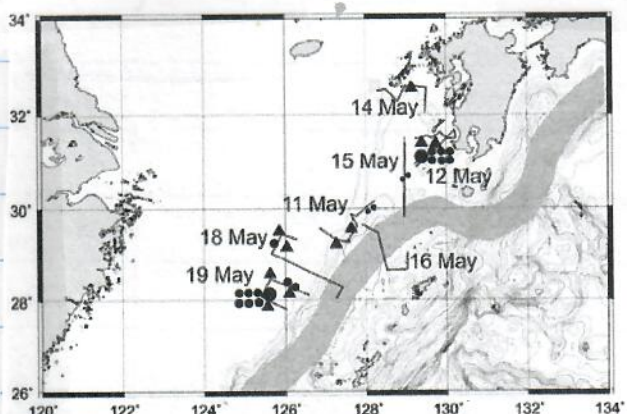

Fig. 2 Visual survey transects for drifting seaweed rafts (solid lines) in the East China Sea during R/V Hakuho Maru cruise, KH-02-1 leg1, and the distribution of the latter (closed circles and triangles) in May 2002. Large, medium and small closed circles are drifting seaweed rafts with diameters over 3 m, of 2-3 m, and 1-2 m, respectively. Triangles are groups of drifting seaweed rafts with diameters below 2 m. Dark stripe represents the path of Kuroshio Current (source: Hydrographic and Oceanographic Department of Japan Coast Guard, 2002)

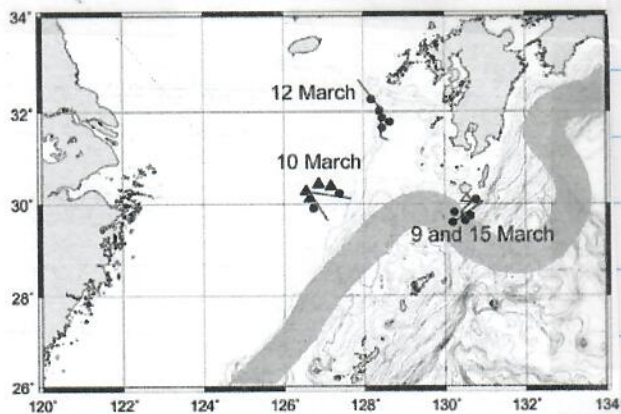

Fig. 3 Visual survey transects for drifting seaweed rafts (solid lines) in the East China Sea during R/V Hakuho Maru cruise, KH-04-1, and the distribution of the latter (closed circles and triangles) in March 2004. Large, medium and small closed circles are drifting seaweed rafts with diameters over 3 m, of 2-3 m, and 1-2 m, respectively. Triangles are groups of drifting seaweed rafts with diameters below 2 m. Dark stripe represents the path of Kuroshio Current (Source: Hydrographic and Oceanographic Department of Japan Coast Guard, 2004)

No obvious relation was noticed between food organisms of the fish and fauna attached to floating seaweed. The four species, excluding *Enedrias nebulosus*, were essentially plankton feeders. Some of the fish larvae found in *Seriola quinqueradiata* were identified as species belonging to the genus *Sebastes*. The food composition of *Hyperoglyphe japonica* was rather complicated and the most diversified, its niche breadth index ($H' = 3.385$) being the highest; *Pyrosoma sp.* was found in all stomachs. The other species had relatively simple feeding habit. The smallest niche breadth index was found in *Sebastes inermis* ($H' = 1.591$), while those of *Seriola quinqueradiata* ($H' = 2.211$) and *Thamnaconus modestus* ($H' = 2.248$) were not excessively different (Fig. 8). Low similarity values were obtained for all diets when niche overlap indices were high, specially between *Seriola quinqueradiata*, *T. modestus* and *Sebastes inermis* (values > 0.850) (Table 2).

Introduction

On rocky coasts along the northwestern Pacific, Sargassum species form a luxuriant stand in spring and summer and summer (Kurokawa et al. 1992). In spring, the Sargassum forest has a great influence on the distribution of many species.

福康安紀功碑 "BI XE"

清乾隆51年 (西元1786年) 臺灣發生林爽文抗清事件，次年福康安將軍率大軍渡臺平亂，順利解救諸羅 (嘉義古名) 城之圍。諸羅縣因此次戰役，獲乾隆皇帝賜改地名為嘉義 (嘉許其死守城池之忠義)，並為褒揚戰功，御製10座紀功碑，其中9座立於臺南府城，1座立於嘉義，成為更改地名的信物，見證歷史的古文物。

立於嘉義的紀功碑，額刻「御製」，雙龍紋飾，碑文採詩文方式，詩題「命於臺灣建福康安等功臣生祠、詩以誌事」，以漢文及滿文對照合璧，甚為罕見。

赤崁樓

國定古蹟
創建於明永曆七年（1653年）

Chihkan Tower

Chihkan Tower (Former Fort Provintia)

Chihkan Tower is the landmark of Tainan and its most famous historic site. In 1653 the Dutch built "Fort Provintia" in this area, and the Chinese named it "Tower of Savages" or "Tower of Red-haired Barbarians". Chihkan Tower is its official name today. Even though this site has gone through many rulers (Ming, Qing, Japan and KMT), it retains its rich and graceful architectural aspects. Crammed with various kinds of steles, stone horse, stone dumbbells, stone weights, and nine stone tortoises carrying royal stele carved in both Chinese and Manchurian, the courtyard looks like an outdoor museum. Between the Sea God Temple and Wen Chang Pavilion, there is a well; people said that under the well, a tunnel connected with Anping Old Fort. But several years ago, it was excavated and evidenced only a well. The well provided water for the people who lived inside the fort. Chihkan Tower is particularly attractive at night.

赤崁樓（せつかんろう）は台南市で最も有名な古蹟であり、台南市のシンボルでもある。明朝の永曆7年（1653）、オランダ人はここに「普羅民遮城」（プロヴィンシヤ城）を建造した。漢民族に「赤崁樓」もしくは「番仔樓」、「紅毛樓」などの名称で呼ばれている。赤崁樓は明朝末期の鄭氏一族の時期、清朝時代及び日本統治時代の變遷を経て、戦後の現在に至るも一つの風雅優美、層次豊かな建築物である。庭園に佈かれた各種の碑碣（いしぶみ）、石馬、石駝、技勇石及び滿洲文字と漢字の二種類文字が刻まれた九基の巨大な鼎屨御碑（ひきぎょび）等は、戦後、市内の各地点に散らばっていたのを次々とここに移された歴史的価値のある文化財で、あたかも戶外博物館の観がある。赤崁樓の夜景は観光客にとって一見に値する風景である。

The Five Exercises of Falun Dafa

Buddha Displaying a Thousand Hands

Using gentle stretching movements, the first exercise opens all of the body's energy channels, creating a powerful energy field.

Falun Standing Stance

Comprised of four still positions that can be held for several minutes each, the second exercise boosts energy levels and awakens wisdom.

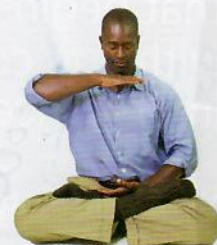

Penetrating the Two Extremes

With its gentle hand-gliding movements, the third exercise purifies the body using energy from the cosmos.

Falun Cosmic Circuit

By gently tracing the hands over the body, front and back, the fourth exercise rectifies abnormal conditions in the body and circulates energy.

Strengthening Higher Abilities

A meditation that incorporates special mudra and hand positions to refine body and mind, the fifth exercise strengthens higher abilities and energy.

note

家恩：

經過長時間思考後,我覺得我們之間沒有再合作的必要
兩岸合作各項事宜,在妳們"祖國"的一中架構下,本來就是
難以執行的障礙

這次我會做這項工作,是答應小琉球鄉長才做的.事實上
今年暑假並沒有得到任何政府的補助,是實驗室硬擠出錢
來做的,找龜那幾天又遇上颱風,所有的工作都在大風大
雨中進行.而妳除了剛開始會表示尊重外,事後所有送來
的信息都是對鄉長去的.我們的努力在這些往來的信件
中,變成了路人甲及路人乙而已.而且妳的發報器是寄給
鄉長的,這在學術界而言,是非常不尊重人的行為.再者,妳
和我要母龜體長資料時,美國那一份說是要做參考,事實
上是妳替Balazs做數據分析,這也是不誠實的行為.前段日
子提到兩邊合作的事,妳也表示過沒有意願.

所以,以後就不必寄任何衛星發報器給我獲鄉長,由於有
能力且合法在台灣進行母龜衛星追蹤工作的只有我的團
隊,所以也不必再寄給鄉長,我會使用自己的發報器而拒
絕幫妳做(何況我和他之間無公事上的關係).

Ninety-year-old wins martial arts championship

UPHOLDING TRADITION:

The retired physician said he has practiced martial arts for more than 70 years after his father advised him to learn the traditional Chinese sport

BY **HSIEH WEN-HUA**
AND **STACY HSU**
STAFF REPORTER, WITH STAFF WRITER

Ninety-year-old Ho Kuo-chao (何國昭) has proved that being old does not always mean acting old by wowing a panel of judges at a talent competition on Sunday with his sophisticated martial art skills, bagging the championship.

Leading a group of younger martial artists, Ho confidently brandished traditional weapons while doing five consecutive splits before performing drunken boxing. His performance also included several forward rolls and an ending pose of a left split, drawing a round of applause from audiences and judges and outperforming 11 other groups of elderly finalists.

The contest was organized by the Ministry of Health and Welfare and the Taiwan Catholic Foundation of Alzheimer's Disease and Related Dementia.

Veteran actor Chin Shih-chieh (金士傑), who served as a judge for the competition, said jokingly that watching someone as old as Ho doing consecutive splits was a "horrifying" experience.

The skills staged by the younger performers also captured the essence of classic martial art movements and were equally fascinating, Chin said.

Taipei Jen-Chi Relief Institution director Tai Tung-yuan (戴東原), who joined the competition as a guest, said for a 74-year-old man who even had difficulty standing up from a tatami mat when visiting Japan, Ho's flexibility was rather impressive.

As the founder of Chien Hsing Martial Club in Greater Tainan, Ho said he has practiced martial arts

for more than 70 years after his father advised him to learn the traditional Chinese sport to help boost his immune system.

After retiring as a physician several years ago, Ho followed in the footsteps of his father and grandfather, both of whom were doctors, and started teaching martial arts and Song-Jiang Jhen Battle Array (宋江陣) — a form of performing

arts that combines elements of kung fu, dance and drumming — at local schools and temples.

According to one of Ho's students, winning the competition is a bittersweet moment for the 90-year-old, who had thought about retiring from the martial art circle after his wife of 63 years passed away about six months ago.

"It is the words of encourage-

ment from my students that have reminded me of my mission to reinvigorate and pass down the national sport," Ho said.

Ho said he has decided to donate half of his NT\$100,000 prize money to the Alzheimer's foundation, in a bid to help more elderly people who have also lost their "better halves" to walk away from the grief.
