特性：

> Aloha Naia, a new 20-minute show, debuted at the open-air Dolphin Lagoon Theatre last month. Exploring the special connection between people and naia (dolphin), it is presented daily at 12:30 p.m.

Hawaii's honu (Hawaiian green sea turtle) will be honored during World Turtle Day on May 23. Highlights include crafts, games and the release of two honu at Kaupo Bay, across from the park. You can help name two other honu that will live at the park until they reach the appropriate size for release. Go to facebook.com/SeaLifeHawaii from May 16 to 22 to submit suggestions. These two young turtles can be seen at the Discovery Reef Touch Pool from 10:30 a.m. to noon and 1:30 to 3:30 p.m. on World Turtle Day. The winning names will be announced there at 1:30 p.m.

>> Keiki Sunday on June 3, 10 a.m. to 2 p.m., celebrates World Oceans Month with live entertainment, games and crafts. Two children through age 12 will receive free admission when accompanied by a paying adult, and the first 100 kids in that age range who enter the park will receive a free dolphin plush toy.

Pacific Islands Regional (Oceania) Meeting
 38th International Sea Turtle Symposium, Kobe, Japan
 February 19, 2018 @ 9:00am

DRAFT AGENDA

Meeting Objectives:

- 1) To promote collaborations among programs and scientists from throughout the vast nations and territories of Oceania to share information, experiences, and build partnerships to support sea turtle research, conservation and management.
- 2) In Kobe, we will highlight the international connectivity between sea turtle nesting and foraging populations.

The Pacific Island Region (Oceania) is represented by the following countries/territories/states:

| | |
|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| Polynesia | Cook Islands, French Polynesia, Hawaii, Kiribati (Line Islands), New Zealand, Pitcarin, PRIAs (Palmyra), Samoa, American Samoa, Tokelau, Tonga, Tuvalu |
| Micronesia | Commonwealth of the Northern Mariana Islands, Guam, Federated States of Micronesia (Yap), Marshall Isls., Palau, W. Kiribati |
| Melanesia | Fiji, New Caledonia, Papua New Guinea, Solomon Islands, Vanuatu |

Uchida & ~~TERUYA~~ 1988
~~TERUYA~~ 1988

Honorable Yoshimasa Matsuzawa, Ph. D.
Sea Turtle Association of Japan, Director and President

Dear friends:

Rene

By this means I send my best wishes of success for the authorities and those attending the 30th Anniversary of the Sea Turtle Conference that was held here in Hiwasa in 1988 and whose president on that occasion was Dr. Itaru Uchida.

In 1965 I started the sea turtle conservation and research activities in Mexico, in 2002 I left the National Fisheries Institute, however I have noticed that interest in these species, new research and conservation methodologies have greatly evolved.

In the years of 1972 and 1977 I was in Japan to work and study, under the direction of Dr. Takeyuki Doi, researcher of Tokai Suisan Kenkiusho in both times and I had the opportunity to visit the Aquariums of Himeji and after Nagoya, under the direction of Dr. Itaru Uchida, from whom I learned a lot about the behavior of sea turtles, especially *Caretta caretta*, in Japan, species that is shared with the western coast of Baja California, Mexico. Currently I participate in the studies on the incidental capture of this species, in this coast.

Since 1972, I have always been in contact with Dr. Uchida, to whom by this means I send my best regards.

Also I take this opportunity to congratulate the "tortugueros" friends at that time, here present and also those absent friends, as well as the new researchers, I wish for all of you great success in their conservation and research activities.

Special thanks to my friend George Balazs.

Cordially

Dr. Rene Marquez-M.

Although it has been three decades since my visit to Hiwasa for the International Symposium on Sea Turtles, I still carry fond memories of the event and the kindness and hospitality shown the participants by the people of Hiwasa. Although I am unable to attend this small reunion to commemorate the event, I have not forgotten the people of Hiwasa and their dedication to the preservation of sea turtles. I hope that the attitudes and activities of Hiwasa's people towards sea turtles continues and that the town and its community will prosper, now and in the future. Aloha, Mike

McCoy

Dear Friends in the City of Hiwasa:

KAREN

I am writing to you from Florida in the United States, and I have asked Mr. George Balazs to share my words with you.

It is difficult for me to believe that it has been 30 years since I visited your beautiful city and joined the celebration of Urashima Taro. I always remember the kindness of the people I met and the excellent support your community has given to sea turtles over many decades.

It was my great honor to meet Mr. Yasuo Kondo and to celebrate his important contributions to sea turtles and the longest running study of sea turtles in the world.

Although I cannot be with you today, please know that I am with you in spirit. I wish you all peace and prosperity.

Best regards,
Karen Bjorndal

HIGH SEAS

Ships of Opportunity: Releasing Satellite-tagged Loggerheads on the High-seas to Study their Pelagic Ecology.

George H. Balazs, Marc Rice, Denise Parker and Jeffrey Polovina

THE VOID of SPACES OF SET

Life on the high seas is one of the last great frontiers for sea turtle exploration, inquiry and discovery. In the Pacific ocean, significant progress has ^{ACHIEVED} begun in understanding the ecology and oceanic movements of juvenile pelagic loggerhead in northern and southern hemispheres comprising distinct genetic stocks derived from nesting beaches in Japan and New Caledonia/Australia respectively. Our advances in knowledge to date have been made possible by the availability of smaller satellite-linked tracking tags and the enhanced sensitivity of CLS Argos receivers on board orbiting satellites. We have overcome the immense challenge of directly capturing immature loggerheads on the high seas by substituting robust aquarium-reared turtles transported by ship for offshore release. We have also utilized turtles taken as pelagic long line by-catch then satellite-tagged and released by trained shipboard observers. Turtles

1. As you can see from this lecture, it is the people who live in modernized cities that reduced sea turtles.
2. However, people living in city banned capture of turtles by country people.
3. As a result, the ecosystem may be destroyed this time.
4. Naturally, the ecosystem is constantly changing. People living in the ecosystem need to know the change and adjust them finely.
5. LRMC has been practicing it. Previous LRMC was volunteer and social status was low, but their roles are important and big from now on. Unfortunately Japan's LRMC is extinct.
6. Researchers and government need to request LRMC again.

TOTAL PROTECTION BY GOV. DECREE MAY NOT ALWAYS BE BEST FOR SUSTAINABLE CONSERVATION

INTRODUCTIONS — BY SHRITKA & SARAS?

ROSIE COONEY

Chair, IUCN CEESP/SSC Sustainable Use and Livelihoods Specialist Group (Dec 2011-present)

What does the ESA do ^{culturally} for people & turtles in CNMI, Guam & Am. Samoa (+PRIS)?

ANSWER — BLOCKS them out.

"They find it easier to colonize than learn and understand the culture... old colonial inertia still rolling, like a bad ocean swell."

NGO ORGANIZATION/ENTITY

- Need 400,000 USD for GRAHAME
- Chaloupka & Balazs 2007

MC — MASTER of Ceremonies/Moderator

"FREE AND OPEN DISCUSSION
NO DATA DOESN'T MEAN DECLINING
AND ENDANGERED"

LIST OF QUESTIONS FOR CONVERSATION
DISCUSSION

Subject: Estimated numbers and ESA species in neritic coastal habitats of Hawaiian Islands

A suggested linked Topic under existing "ESA Agenda Item" for PSAC discussion:

Linkage: The ESA frequently desires/requires numbers for the population/species being protected under it's umbrella. The Hawaiian green turtle population is ESA listed but, except for nesting population numbers (adult females at FFS), there have been no estimates of immature turtle residing in neritic coastal habitats at present compared to circa 1978 when ESA protection started. Such an estimate would be highly informative to administrators/managers of the ESA within NOAA and the FWS. It would also illuminate and enhance transparency to the public at large in support of the ESA.

Possible Action Item for PSAC discussion under existing ESA agenda item: Recommend to the Council that estimates be generated from existing data enumerating population numbers for green turtles resident to the Hawaiian Islands- present and past during the ESA protection era.

Chinese military lands long-range bombers on isles in disputed area

Associated Press

5/20/18

2 BEIJING >> The Pentagon criticized what it called China's "continued militarization" of island outposts in the disputed South China Sea, where the Chinese air force landed long-range bombers for the first time, putting entire South-east Asia within their range.

The China Daily newspaper reported Saturday that the People's Liberation Army Air Force conducted takeoff and landing training with the H-6K bomber in the South China Sea.

China is pitted against smaller neighbors in multiple disputes over islands, coral reefs and lagoons in waters crucial for global commerce and rich in fish and potential oil and gas reserves.

A statement from the Defense Ministry late Friday said the exercise was conducted on an island reef, but it did not specify when or where, saying only that it took place recently at a "southern sea area." It involved several H-6Ks taking off from an air base and making a simulated

strike against sea targets before landing, the ministry said.

The U.S., which doesn't have any territorial claims but insists on freedom of navigation and a peaceful resolution of the disputes without coercion or threat of force, criticized the move.

"The United States remains committed to a free and open Indo-Pacific," a Pentagon spokesman, Marine Lt. Col. Christopher Logan, said in an email. "We have seen these same reports and China's continued militarization of disputed features in the South China Sea only serves to raise tensions and destabilize the region."

The Washington-based Asia Maritime Transparency Initiative, using Chinese social media posts, identified the location of the exercise as Woody Island, China's largest base in the Paracel Islands that also are claimed by Vietnam and Taiwan.

With a combat radius of nearly 1,900 nautical miles, the H-6K bomber would put all of Southeast Asia in its range from Woody Island, AMTI said.
