

Identification of algae from turtle feces

collected at Kailua, Nov. 22, 1989

Isabella A. Abbott

Dec. 18, 1989

Methods: Each sample was shaken well and about 10 ml poured out into a petri dish which was placed under a dissecting 'scope and examined. Representative pieces were removed to a microscope slide for identification under low power. Taxa are listed in order of occurrence (no more than 3 species were recognized).

- #1 Amansia glomerata; Codium edule
- #2 Codium sp., Amansia glomerata
- #3 Amansia glomerata only
- #4 Codium edule; Amansia glomerata
- #5 Amansia glomerata only
- #6 Caulerpa sp., Amansia glomerata; Codium sp.
- #7 Amansia glomerata only
