Turtle Log

1987

George -

There once was a man named Balazs  
who chose to help with cause

A lady named Marilyn  
who to George's chagrin

Chased turtles on East without a pause.

Marilyn

4 July 1987

Report of Turtle Autopsy 6-10-87  
Jern Island

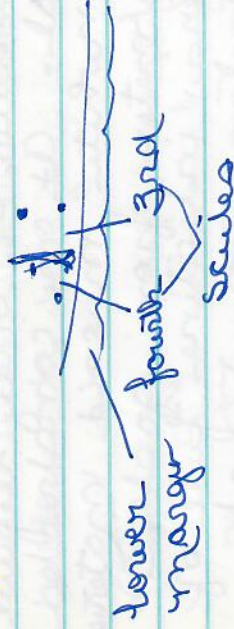

Slides will accompany this report

External Observations

(L) No tags, CL 87.5, Head 11.3 cm.  
(L) Hind flipper partially amputated and healed

(L) Third scute, close to lower margin, one puncture hole through external shell, completely healed

(R) Third + fourth scutes, close to lower margin, four puncture holes to outer shell in the following configuration

(L) fore flipper amputated at joint. New unguit. Near central scute with lacinated though outer layer of shell. Tail completely amputated. Part of rear plastron chewed away. Internal tissue exposed. New unguit.

① hind flipper with slash cut. Shape of tooth apparent. Excess skin on neck and shoulders. Subcutaneous fat layer absent. No external tumors.

### Internal Observations

1. Stomach - filled to capacity with codium and green material (? algae). Specimen obtained.
2. Stomach full to capacity. Several different materials. Specimen obtained.
3. Small intestine. Some sections full of fecal material either dispersed with constrictions. Areas almost devoid of any contents or only liquid material. At one constricted area white mucoid material. About 1 meter from caecum sphincter, intestine full of liquid fecal material (brownish, beige liquid). After this a constricted area with no fecal material. Specimen of intestine wall from both areas obtained. In and out intestine, filled areas followed by constricted empty areas.

Rather up to 16 inches long  
4. Heart - no evidence of blood flukes.

### Reproductive organs -

Female - specimens obtained

### Kidney

appear darker than normal

Intestines - entire length

checked - no parasites

### Yarassa's specimens:

muscle, heart, ovary, lung, intestinal wall, stomach wall, skin, kidney

Yarassa's specimens for George:

in 5% formalin

20 stomach contents

Stomach contents

Ovary (reproductive)

Small intestine wall

(2 sections)

Rock will bury and give you the exact location marked with a cross to (C) of dump

Much education of observers  
NMFs & NFWS personnel  
and they all helped  
with various aspects of  
the autopsy. But basically  
Vanessa and I did the  
majority of the work.  
You are a good teacher  
and I think you would  
have been proud of your  
students!

My source opinion of  
that turtle's demise:  
bleath due to shark  
attack but an  
underlying problem  
with the construction  
in the intestine may  
have resulted in  
malabsorption of  
nutrients and  
lethargic behavior by  
the turtle which made  
it more vulnerable  
to attack.

Tap on Vern D.

AS of 7/6/24, 87

4 July 1987

I am so disappointed of hearing that Susan is going to be upset about the thing or that thing. As if Susan was the only one to be considered in the situation. I felt like I was walking on glass eyes with her. Just waiting to be told I got too close to a seal or a mom and pup or that I needed ~~that~~ to modify my behavior to meet their (seal & seal researchers) needs. I tried to be flexible and good natured about everything and modify my behavior. But Susan isn't the only person experiencing the stress of the East Island environment.

I will explain the factors which contributed to this outbreak when I return from

①

4 July 1987

Suggestions for East Island 1988

① All persons involved in conducting any research on East Island in 1988, sit down together before going to the field to discuss as many scenarios as possible which might arise during the research period.

The tent arrangement

Must be clearly defined with everyone ahead of

time. The possible number of persons coming and going and the length of stay (estimate longer than expected)

If someone will follow

you for even overnight periods, that should be discussed ahead of time and

Operating rules —

Who sets and modifies policy?

How are restricted areas set and renegotiated?

① Left with Varvara  
Insect repellent  
2 small flashlight (magnets +  
one cell)  
8 AA batteries  
1 pr. leather gloves  
2 pr. phone  
1 tape measure  
1 flashlight bulb for Dell light  
1 D cell flashlight  
tagging gear  
tag # 10025 - 10050  
green notebook  
1 can parrot green paint

Rick's tag as of 8 July 1987

9743 - 9750  
6865 - 6875  
9801 - 9825

Lost tags

9965 dropped on ground  
in tagging effort. Area  
later covered by turtle nesting  
9967 - popped out of gear, under turtle  
9969 - turtle pulled out of  
tag before gear was  
released. Tag lost in  
dark + movement. Tagging  
gear oked

9913 dropped in the dark  
Could not find it then or  
in the light of day

10017 - turtle moved as tag being  
applied, closed without contact  
with turtle

Notes

5-25 When I arrived on East Patch told me he found tag # 3579

on the beach while observing ~~more~~ seals. He gave me the tag and it will be returned to you.

5-26 Susan & I agreed I would conduct backing census at 3 PM because my activities have low impact on seals hauling up at 5 PM. Because there are so

many more pup seals on protected side of island (at H<sub>2</sub>O edge & on berm) I will not

survey the area in the afternoon or at night. I will travel up and down the pole side of the island and around the "nursery"

area even if it means missing a ~~few~~ turtles. Further will return again. Effort when trying to conduct

research on two endangered species and they share the same space!

Bring next year writing implements (oblique can opener yack knife)

new adhesive strips (barcodes) adhesive tape (present stuff doesn't stick at all!)

Paint =

6-24 I've cans of green spray & one blue can located in the store room off Jan. Probably enough for next season but you will need to start testing other marking materials. What kind of paint comes in the paint can? Uni Paint marker Px-20 - oil base. I tested one on a piece of shell, let it dry and then ran it under H<sub>2</sub>O. It holds but seems to wear off easily. Maybe it could be sprayed with acrylic spray to protect it.
