The seized live sea turtle was released immediately after seizure to the open sea

The future research works and possible Cooperation with NOAA

- Research on artificial breeding of sea turtles
- Disease control of the main sea turtle
- Contaminants (POPs, HM and oil etc.) in sea turtle and their eggs
- Enrich the baseline information on the migration passage and key habitats distribution of post-nesting and juvenile sea turtle's through the tracking, tag marking and releasing technology
- Developing the sea turtle protection and management system based on the GIS.
- The impact of climate change on the spawning migration of sea turtles
- Strengthening international communication and collaboration
