

EGG CLUTCH
on natural nesting beach

EGG CLUTCH
moved to different
incubation site due to:

HATCHLINGS
(from natural nest)

high loss
of eggs

high mortality
of hatchlings

convenience
in obtaining
hatchlings

not experiencing
high mortality

experiencing
high mortality

doomed
but rescued

STAGE 1

HATCHLINGS
captured for
head starting

HATCHLINGS
entering the
sea

captive
rearing

natural
growth

STAGE 2
