

2021 PICES SEAturtle Project Update

Project Leader

Taewon Kim

PICES SEAturtle team intersessional meeting

PICES

(March 1, 2021 14:00 PM KST)

- Participants: Taewon Kim, George Balazs, Hideaki Nishizawa, Miyeon Kim, Michelle Maria Early Capistran, George Schillinger, Connie Ka Yan Ng, Kyungsik Jo, Jibin Im
- 1. Tagging sea turtles in Japan this year (Yes/No, if Yes. How many?)
- 2. Tagging sea turtles in Korea this year (Depending on Japan's plan, flexible
- 3. Interview research plan (How many countries will be involved? Incentives)
- 4. Genetic study on Jeju population (Collaboration with MABIK?)

Dive research: Derelict fishing gear and the sea turtle stranding

Background

• Ghost fishing is one of the serious problems that could threaten the survival and health of large marine animals. we investigate the correlation between the frequency of sea turtle stranding and the number of derelict fishing gears (DFG) on the northwest coast of Jeju island.

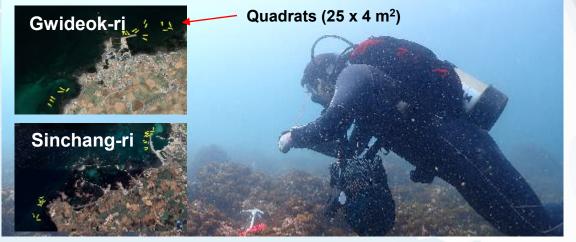

Research Site: The northwest coast of Jeju island (where bycatch of seea turtles are most reported between 2011-2019)

- Gwideok-ri: High stranding pressure (20 stranding)
- Sinchang-ri: Low stranding pressure (3 stranding)
- We predict that Gwideok-ri has more DFG than Sinchang-ri.

Period: Aug 17 – Sep 5, 2020

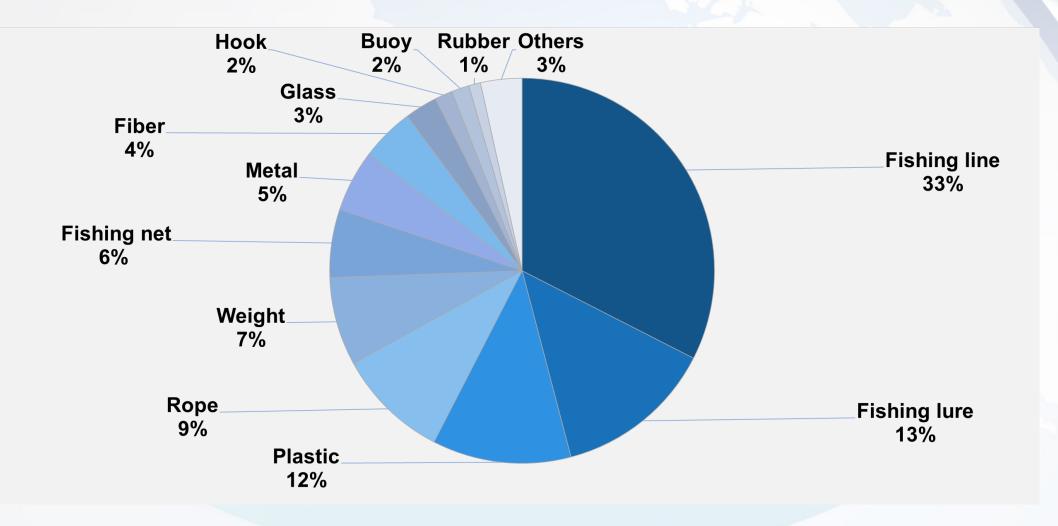

19 quadrats (25 x 4 m²) investigation on the subtidal zone for each site was conducted by using SCUBA diving to investigate the distribution of DFG, and investigate the number of stranded nets. Roughly, both values are high in Gwideok-ri. These samples are being analyzed.

Seven sea turtles released with Iridium tags of PICES SEAturtle project in 2019 - 2020

ID710314 (released in 2019)

PICES SEAturtle team in Korea released 7 sea turtles (6 greens and 1 loggerhead) with PICES iridium tags. In 2020, we ran a social media contest to name 5 of the released sea turtles. A total of 122 names were submitted by the public. Using this method, we were successful in increasing public awareness for the PICES SEAturtle project.
