

Concluding paragraph of: [Balazs et al. 2017. Ocean pathways and residential foraging locations for satellite tracked green turtles breeding in Hawaii. Micronesica](#)

"At this 45-year juncture of continuous research focused on the Hawaiian green turtle, the overall goal of conservation investigations should be adjusted to embrace more than the collection, archiving, and publishing of scientific findings. A new era should be initiated that encompasses cultural integration by and for the indigenous Hawaiian people that are themselves linked for millennia to their green turtles. Exactly how this will take place should be left to Hawaiians to decide."
